ÉDITION — FRANCE

**ECO-RESPONSIBLE
FRENCH MANUFACTURER**

WWW.DESIGNHEURE.COM

A HAUTE COUTURE SIGNATURE

Established since 2005, Designheure is a publisher and manufacturer of contemporary lighting 100% Made in France.

The brand embodies within the world of light a distinct idea of French elegance, creating timeless, top-of-the-range, modular designs.

Designheure surrounds itself with the best designers to create exceptional pieces and is committed to providing its professional customers with a dedicated and tailor-made offer. Its teams are driven by the values of quality of service, personalized customer advice and speed of manufacturing.

In conjunction with its French partners, it carefully selects materials of the highest quality.

Each luminaire, assembled entirely in their workshops, reflects their unique expertise and is subject to rigorous quality control.

Designheure's creations appeal beyond borders: the company has a strong international presence, with more than 50% of its business conducted in 75 countries.

DESIGN CONTRACT LIGHTING

DESIGN & INNOVATION

Designheure creates custom lighting solutions for interior architects and lighting designers who want to share the endless creative possibilities that their customizable solutions provide.

Driven by the desire to respond to the dual imperative of creativity and innovation, Designheure launches new collections every year that are simple, elegant and ingenious, meeting the needs of both private individuals and professional projects.

Designheure has long been committed to creating products that are flexible, customisable and adjustable in space, offering an additional service. All the chandeliers are also made to measure in their workshops in Sète.

The modularity of these luminaires echoes their technical adaptability and their know-how, since they can be adapted to meet the different standards in force around the world.

Designheure is also distinguished by a graphic design that stands out from the minimalist conceptual design. Its complete ranges are available in lively colors that highlight the textile cord as a decorative element.

OUR VISION

At Designheure, we believe that the design of light should bring beauty, poetry and elegance while meeting the requirements of exceptional spaces that must be pleasant to live in and well lit.

WE MAKE AESTHETICS, QUALITY AND FUNCTIONALITY COMPATIBLE.

AT DESIGNHEURE, A DECORATIVE LAMP RHYMES WITH EFFICIENCY, MODULARITY AND FLEXIBILITY.

We offer qualified assistance in all phases of a project. This is possible thanks to the range of products in our catalog or to custom-made products designed according to the most specific requirements - in terms of materials, colors, energy consumption, budget and design.

We offer you the possibility to create unique lighting solutions for each space, based on our concepts and your ideas.

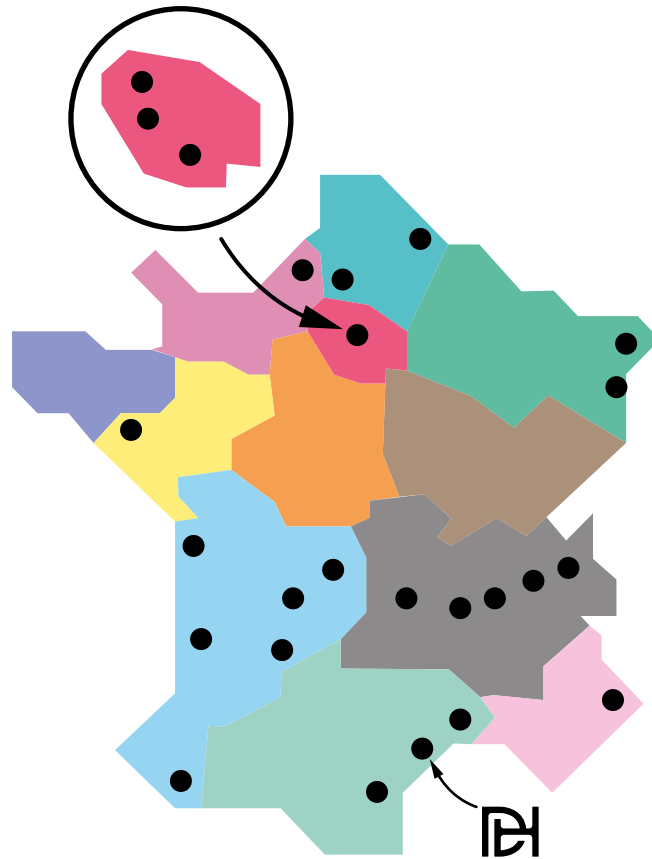

We are passionately committed to bringing each of your projects to life and achieving an exceptional end result that perfectly matches your vision of the art of living.

Proud of all our projects and collaborations, we share and promote your creativity.

Tell us about your inspirations, we will bring them to life!

DESIGN CONTRACT LIGHTING

FRENCH PRODUCTION

Our main suppliers are located in France:

Wood / Marble / Porcelain / Fabric / Steel / Aluminium / Cast aluminium / Brass / Engraving / Cable / Paint / Printer / Cardboard / Carrier...

This proximity reduces the carbon footprint of our products by decreasing transport distances.

In addition, it promotes quality control throughout the production chain, which greatly reduces non-conformity returns that generate unnecessary waste, transportation and pollution.

The entire value chain is 90 to 95% made in France:

Design, development, series, storage, assembly, electrical assembly, certification, catalog printing, packaging, boxes, logistics...

In this search for a short circuit, only 5 to 10% of the cost price of the product is made up of parts that are not available in France, but are sourced in nearby Europe (Italy...).

A RESPONSIBLE APPROACH

FROM DESIGN...

A TIMELESS DESIGN:

Its deliberately timeless design to reduce the rate of replacement through durable design.

MODULAR AND MULTIFUNCTIONAL DESIGN:

We design products with as many common parts as possible and imagine collections that fulfill several different functions (e.g. Mozaik, space divider panel and chandelier with the same base module).

CHOICE OF MATERIALS:

We choose low-impact materials and design our fixtures for the right performance by simplifying the composition as much as possible. We monitor innovative materials that minimize resource consumption. We lobby our suppliers to improve the impact of the components used.

LIFE SPAN AND QUALITY:

In order to extend the life of our products, we select quality components and materials that are as natural as possible. A well-made product is a durable product.

COLLECTION TRACKING:

We guarantee that our collections are tracked over time, which allows a renewal, for example of shades, in case of deterioration or restocking. This avoids a complete change of the luminaire.

PRODUCT ADAPTABILITY:

All of our products are prepared to the right size in our shop, limiting excess cords and cables that would be thrown away during installation. A fixture sized to fit a space and according to its use has a longer life span. For this, we are involved in understanding the flows and needs of our customers.

REPAIRABILITY - SERVICE:

Our electrical components can be disassembled and the sources can be replaced, which also increases the life cycle of the product.

... TO LOGISTIC

AN INTELLIGENT DESIGN:

The majority of our collections have specifically designed stackable shapes that optimize the packaging (weight/volume) and reduce the carbon footprint of transportation.

PACKAGING IN PROJECT MODE:

While avoiding individual packaging, we optimize handling by grouping products according to the order of the installation areas. We reduce the amount of packaging to be consumed, the weight/volume to be transported and then recycled. This reduces the financial and ecological cost of transportation for the customer. This approach reduces the volume to be stored throughout the supply chain (from our workshop, to the logistic platforms, to the installation sites).

CSR POLICY

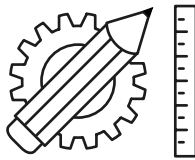

FRENCH MANUFACTURE

The French manufacture of all our collections guarantees quality and speed of manufacturing, lower shipping costs and a smaller carbon footprint. It also aims to develop local employment.

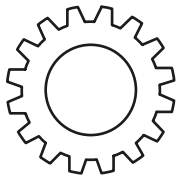

LOCAL EMPLOYMENT AND DISABILITY

We promote local employment: 80% of our employees live within a radius of less than 15 km and 15% of our employees are disabled via the CAP EMPLOYMENT ASSOCIATION.

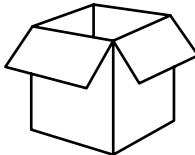

DESIGN

The durability of the products, their pre-stackable form, their packaging and transport in respect of the environment are studied and taken into account right from the product design stage and are an imperative in the designer's initial brief.

LOGISTICAL OPTIMIZATION

Our logistical expertise in "project" mode, without individual product packaging, allows us to reduce carbon footprint and to limit our customers' costs related to transportation and destruction of packaging.

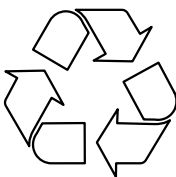

PACKAGING

We have eliminated the plastic protection and bubble wrap in favor of kraft paper. Packaging tapes have been replaced by adhesive tapes made of recyclable paper.

BRANDING / INK

Our boxes are ink and marking free, as are our tapes. We have selected a supplier of ink cartridges for our printers that orients us towards a company which recycles them and is registered in the circular economy.

RECYCLING

We have set up contracts with various companies for the removal and processing of cardboard packaging, pallets and coffee capsules. The company vehicle is a hybrid car.
